

CHANGE NOTIFICATION

SpillKits with protective glove uvex Profastrong – Changes to reusable gloves

SpillKits – change of included protective glove

We will be soon equipping our SpillKits with a new chemical protection glove instead of the MAPA Ultranitрил 492. In the future, SpillKits will include the new uvex Profastrong NF33.

The affected article numbers of the SpillKits:

Item codes:	Item name:	
4004	SpillKit	
4104, 4112, 4115	SpillKit XP, Size M, L, XXL	
4124, 4133, 4135	SpillKit XP Latexfrei, Size M, L, XXL	
100101, 100102, 100103 100104, 100105, 100106	SpillKit XP Duo Size M+M, M+L, M+XXL SpillKit XP Duo Size L+L, L+XXL, XXL+XXL	

Product characteristics of uvex Profastrong NF 33

The reusable glove for chemicals and microorganisms is 33 cm long, passed numerous permeation tests with best results, has an excellent grip and achieved the highest level 5 in the test for dexterity (according to EN 420). Good resistance to oils, fats, acids and solvents are further characteristics.

The glove was tested with 262 chemicals and achieved 140 times the highest performance class 6. In addition, the Profastrong has been certified against viruses, bacteria and fungi in accordance with DIN EN ISO 374-5: 2017-03, to give you the best possible performance and security when dealing with biological hazardous substances.

Changes to reusable gloves

Since demand for direct sales for reusable chemical protection gloves has been very low in the past 3 years and these are only of economic importance in individual sizes in the SpillKits, we will no longer offer reusable gloves separately as sales items in the future. For the time being, this also applies to the new Profastrong, which we will only purchase in bulk for the SpillKits.

The MAPA Ultranitрил 492 is sold and existing bulk goods are used in the production of SpillKits. It is therefore also offered on the Berner website under the heading "Special sale PPE" and then removed from the portfolio.

With best regards from Berner International
