Cytostatic Wipe Sampling Kit

PharmaMonitor

All clean?

When handling CMR drugs (e.g. cytostatics), unintentional cross-contamination from contaminated gloves, vials, protective clothing, shoes, or wheels from transport trolleys, etc. can easily occur. Accidents or disruptions in airflow of safety cabinets can also lead to the release of cytostatic drugs. In the German MEWIP study (Monitoring-Effect-Study for Wipe Sampling in Pharmacies) cytostatic drugs were found in 61% off all wipe samples.

Wipe sample kit "PharmaMonitor":

In cooperation with the Institute of Energy and Environmental Technology (IUTA e.V.) in Germany, BERNER International has developed a wipe sample set, with which contaminations from CMR drugs can be detected quickly and safely. Through regular monitoring weaknesses in the production, handling and cleaning processes are easily detected and corrected.

Your benefits at a glance:

- Validation of cleaning processes (Standard cleaning and after accidents, e.g. with cytostatics)
- Detecting sources of contamination (e.g. in front of safety cabinets, refrigerator handle, store, transport trolley, ...)
- Control and optimisation of work processes
- Proof of the optimum work procedure for your customers
- Cost-effective analysis tool
- Suitable for use by own staff
- Analysis of 25 single substances or as a group using different multi-methods
- Fast and detailed report on findings by a named organisation
- Can be performed at any time

✓ 5-Fluorouacil	✓ 6-Mercaptopurine
✓ Cyclophosphamide	✓ Acemetacine
✓ Ifosfamide	✓ Azathioprine
✓ Gemcitabine	✓ Busulfane
✓ Etoposide	✓ Capecitabine
✓ Methotrexate	✓ Carmustine
✓ Paclitaxel	✓ Chlorambucil
✓ Docetaxel	✓ Clomiphene
✓ Cisplatin	✓ Cytarabine
✓ Carboplatin	✓ Flutamide
✓ Oxaliplatin	✓ Tamoxifen
✓ Total-Platinum	✓ Thalidomide
✓ Mitomycine
