Legal foundations

The reason behind the comprehensive range of standards and laws on the subject of personal protective equipment (PPE) is the safety of the user. PPE is divided into 3 categories:

<table>
<thead>
<tr>
<th>Protection</th>
<th>II</th>
<th>III</th>
</tr>
</thead>
<tbody>
<tr>
<td>against minimal risks</td>
<td>against medium risks</td>
<td>against deadly hazards or serious irreversible damage to health</td>
</tr>
</tbody>
</table>

**EC- Quality assurance**
- ✔
- ✔
- ✔

**EC- Type testing**
- ✔
- ✔

**Category**
- CE
- CE
- CE + identification no.

1 Number of notified body: http://europa.eu.int

The necessary PPE category for each case is determined as part of a risk analysis. For chemicals, CMR pharmaceuticals and biological agents it is the highest category III.

**PPE-USER REGULATIONS**

The German PPE user regulations (PSA-BV) are the implementation of the EU-directive 89/686/EEC.

§1 The law regulates the supply of personal protective equipment (PPE) by the employer as well as stating their use by the employees.

§2 describes the basic requirements which the employer has to adhere to for the acquisition, maintenance and storage of the PPE.

§3 contains information on how to instruct and train the employees in the use of PPE.

In Europe all PPE which is brought into circulation has to be tested to the harmonised European EN standards. Tests based on the American ASTM standards are not permissible according to European law. The adherence to the specific standards is intended to provide safety for the user. Values such as permeation times (for chemicals – breakthrough times on a molecular level) can only be compared if they were all tested to the same standard.

**LEGAL PROVISIONS WITHIN THE EU**

1. **EU – PPE directive (89/686/EEC)**
2. **General EN standards for specific PPE** (e.g. EN 340 for protective clothing, EN 420 for protective gloves)
3. **Test standards for specific applications** (z.B. EN 374 part 1-3 for chemical protective gloves)
4. **Implementation into national law** (Laws regarding the availability of personal protective equipment on the market)
5. **PPE- User regulations** (e.g. PSA-BV in Germany)

**OVERVIEW OF LEGAL FOUNDATIONS**

Important European test standards for: Protective clothing (only type 3 and 4) against chemical and infective agents

- EN 340 – Protective clothing for general requirements
- EN 14126 – Performance requirements and tests methods for protective clothing against infective agents
- EN 14325 – Protective clothing against chemicals - Test methods and performance classification of materials, seams, joins and assemblies
- EN 14605 – Protective clothing against liquid chemicals - Performance requirements for clothing with liquid-tight (type 3) or spray-tight (type 4) connections
- EN ISO 6529 – Protective clothing - Protection against chemicals - Determination of resistance of protective clothing materials to permeation by liquids and gases
- EN ISO 6530 – Protective clothing - Protection against liquid chemicals - Test method for resistance of materials to penetration by liquids
- EN ISO 17491-3 – Protective clothing - Test methods for clothing providing protection against chemicals - Part 3: Determination of resistance to penetration by a jet of liquid (jet test)
- EN ISO 17491-4 – Protective clothing - Test methods for clothing providing protection against chemicals - Part 4: Determination of resistance to penetration by a spray of liquid (spray test)
- EN 13921 – Personal protective equipment - Ergonomic principles

**Protective gloves against chemicals infective agents**

- EN 420 – Protective gloves - General requirements and test methods
- EN 374-1 – Protective gloves against chemicals and microorganisms - Part 1: Terminology and performance requirements
- EN 374-2 – Protective gloves against chemicals and microorganisms - Part 2: Determination of resistance to penetration (Breakthrough due to micro holes)
- EN 374-3 – Protective gloves against chemicals and microorganisms - Part 3: Determination of resistance to permeation by chemicals (Breakthrough at a molecular level)
- EN 374-4 – Protective gloves against chemicals and microorganisms - Part 4: Determination of the resistance against degradation by chemicals
- EN 388 – Protective gloves against mechanical risks

**Eye protection**

- EN 166 – Personal eye protection - requirements

**Particle filtering masks**

- EN 149 – Respiratory protective devices - Filtering half masks to protect against particles - requirements, testing, marking
- EN 136 – Respiratory protective devices - Full face masks - requirements, testing, marking

The right glove should not just fit – it should also be easy to change and above all, provide reliable protection against hazardous substances. In accordance with the relevant regulations in the EU, the employer is required to provide his employees with suitable protective gloves of the correct category when handling dangerous materials. Berner International offers certified gloves of premium quality - safe and comfortable. Therefore you should pay attention to the quality of your personal protective equipment.

Your safety is at stake.

You would like further details? To access more information using your smartphone or tablet, www.berner-safety.de/gloves
COMPLETE DOCUMENTATION

For the GMP-compliant manufacturing of e.g. cytotoxic drugs sterile protective gloves which are suitable for cleanroom use are an absolute must. On request Berner International can automatically send you the appropriate sterility certificates for every batch.

PROTECTION AGAINST CHEMICALS AND CMR DRUGS

Permeation tests in Europe are always carried out in accordance with the directive 89/686/EEC (PPE) to EN 374-3. This is to ensure comparability of the protective properties. However, some products can always be found on the market which have either only been tested to the American standard ASTM F739 or ASTM 6978, or which comply solely with the directive for medical gloves (EN 455).

PROTECTION AGAINST VIRUSES AND BIOLOGICAL AGENTS

Penetration tests (breakthrough through microholes) are tested within the EU in accordance to EN 374-2. Unfortunately the test to EN 374-2 does not include a virus test. For this reason, Berner International always makes sure that all protective gloves are additionally tested to the American standard ASTM F 1671.
**New**

---

* **Dermagrip Ultra LT**

Protective glove with innovative SafeDon-dispensing system

Short nitrile protective glove for working in non-sterile areas (e.g. preparatory work in the cytostatic laboratory, biology laboratory, oncology ward, veterinary practice, etc.). With the new SafeDon dispenser system contaminations have been shown to be greatly reduced. At the same time the size of the packaging has been reduced. Available as a 250 dispenser box (suitable dispensing system available) or 50 dispenser box for mobile applications.

Permeation list: Tested for various substances.
Detailed information available at www.berner-safety.de/safedon_gb

- **Certified safety**
  - AQL = 1.5 (water test)
  - Additionally tested as medical gloves according to 93/42/EEC (CE class 1) EN 455.

- **Material**
  - Special nitrile mix
  - Non-sterile
  - No detectable allergens
  - Especially resistant against many chemicals

- **To order** Dermagrip Ultra LT – colour light blue

**Manu N**

Nitrile protective glove – the marathon glove

N stands for nitrile, a synthetic copolymer with a special composition. To guarantee the highest level of protection of nitrile protective gloves, many years of experience and various permeation tests have been necessary. The Berner protective glove Manu N sets new standards when handling chemicals, CMR drugs (e.g. cytostatics) and biological agents.

A comprehensive permeation list: Tested for numerous substances.
Detailed information available at www.berner-safety.de/manu_n_gb

- **Certified safety**
  - AQL = 1.5 (water test)
  - Ideal for e.g. the GMP-compliant production of cytostatics
  - Suitable for cleanrooms up to ISO class 5 to EN ISO 14644-1:1999
  - Sterile poly/poly bag packaging
  - Viral protection in accordance to ASTM F 1671

- **Material**
  - Special nitrile mixture
  - Sterile and non-sterile
  - No detectable allergens
  - Especially resistant against many chemicals

- **To order** Manu N Z+B+® – colour light blue

Manu Prene XP
Latex-free neoprene glove – not just for allergy sufferers

Neoprene protective gloves made from especially high quality polychloroprene and protect the user from CMR substances e.g. cytostatics, various chemicals, biological agents and viruses. Due to the material composition these gloves are to be particularly recommended for existing latex allergies.

Comprehensive permeation list: Tested for numerous substances. Detailed information available at www.berner-safety.de/manuprene_gb

Certified safety
+ AQL = 1.0 (water test)
+ Ideal for e.g. the GMP-compliant production of cytostatics
+ Suitable for cleanrooms up to ISO class 5 to EN ISO 14644-1:1999
+ Sterile plastic packaging
+ Viral protection in accordance to ASTM F 1671
+ Additionally tested as medical gloves in accordance to EN 455

Material
+ Sterile and non-sterile
+ No detectable allergens
+ Polymer-coating for easy donning and removal
+ Anatomical shape
+ Length: 295 mm
+ Special stainless steel dispenser system available

To order Manu Prene XP Z+B+® – colour latte macchiato

Manu L
Latex protective glove – the tough standard

L stands for „Latex“, a natural product, which is made from the sap of the rubber tree. The protective gloves’ distinguishing features are their special elasticity, high wearing comfort and extra protective properties for cytostatic substances, many chemicals and biological agents. A special virus protection test provides additional safety.

Comprehensive permeation list: Tested for numerous substances. Detailed information available at unter www.berner-safety.de/manu_l_gb

Certified safety
+ AQL = 1.0 (water test)
+ Ideal for e.g. the GMP-compliant production of cytostatics
+ Suitable for cleanrooms up to ISO class 5 to EN ISO 14644-1:1999
+ Sterile polythene packaging
+ Viral protection in accordance to ASTM F 1671
+ Additionally tested as medical gloves in accordance to EN 455

Material
+ Sterile and non-sterile
+ Powder-free
+ Low in protein: 17 µg/g
+ Very low allergenic: 0.5 µg/g
+ Anatomical shape
+ Length: 295 mm
+ High material thickness
+ Special stainless steel dispenser system available

To order Manu L Z+B+® – colour dark blue

**Profeel NR**
Latex glove - low material thickness with good protection

New, top quality chemical protective glove (Erlenmeyer flask) with optimised fit for long, fatigue-free working. Due to the low wall thickness offers the protective glove offers "double-gloving" good texture. The inner coating makes it easier to change the gloves, the rolled edge fixed the glove shaft to the coverall or oversleeve. Also suitable for use with isolator rings.

**Certified safety**
- AQL = 1.0 (water test)
- Optimal for GMP-compliant production of cytostatics
- Suitable for cleanrooms up to ISO class 5 to EN ISO 14644-1:1999
- Poly/poly sterile packaging
- Viral protection in accordance to ASTM F 1671
- Additionally tested as medical gloves in accordance to EN 455

**Material**
- Sterile
- Powder-free
- Low in protein: 12 µg/g
- Very low allergenic: 0.3 µg/g
- Anatomical shape
- Length: 290 mm

**To order** Profeel NR – colour vanilla

Isolator-glove changing system
Changing gloves safely during normal operation

When handling cytostatic substances and CMR drugs, but also chemicals, there are recommendations set out by the German Federal Association for Health and Welfare (BGW), which states that protective gloves should be changed at least every 30 minutes. The reason for this is the breakthrough on a molecular level (permeation), which is the movement of a chemical through the unbroken protective material. The innovative glove changing system makes it easy and safe to keep to the recommended changing times for protective gloves. The complete glove changing system can also be installed at other commercially available isolators and glove boxes. Should you already have a double ring system- our gloves will very likely fit your system, too.

+ Keeping to the recommended glove changing frequency is easily achieved even when working at an isolator
+ Changing gloves safely while in use due to multiple sealing system
+ Cost-effective: Expensive special gloves are unnecessary
+ Perfect protection: Tested and certified protective gloves

**To order** Isolator-glove-changing system Z+B®

**INFO**

Expert knowledge safety gloves
DIFFERENCE BETWEEN PENETRATION AND PERMEATION

**Penetration** is defined as the **passage of material through micro-holes**!

These can be caused during manufacture, or incorrect packaging or storage.

**Permeation** is the **passage of substances on a molecular level in undamaged material**!

Depending on the protective barrier or chemical, this process can take from a few seconds to many hours/days.

Penetration is defined as the passage of material through micro-holes!

Permeation is the passage of substances on a molecular level in undamaged material!
Protective coveralls and partial body protection clothing for the laboratory in Europe, just like gloves, have to comply with the PPE directive 89/686/EEC. Depending on the individual risk assessment suitable protective clothing has to be selected. We would be pleased to advise you to determine the appropriate protective clothing suitable for your specific needs. It’s all about your safety.

You want to know more? Simply use your smartphone or tablet to access www.berner-safety.de/ppe
PROTECTIVE CLOTHING PYRAMID

The safety pyramid gives an overview over the various protection levels. Within these protection levels different materials and seam finishes offer, in conjunction with the other PPE components, advantages for protective functions.

¹ Number of the certificated notified body: http://europa.eu.int

The necessary PPE category for each case is determined with the aid of a hazard analysis. For CMR pharmaceuticals, for example, it is the highest category III.
**Protective coverall Active Breath Z+B+®**

Certified type PB4 breathable personal protection against chemicals and CMR-drugs

Category III protective coverall offers optimum protection against hazardous substances such as chemicals, CMR drugs (e.g. cytostatics) and biological agents. However, this is usually at the expense of breathability and wearing comfort. For this reason cleanroom overalls tend to be worn instead. These offer breathability and protection for the cleanroom, but they are not classed as certified personal protection equipment (in accordance to the PPE directive 89/686/EEC certified PPE must be worn when handling hazardous substances).

The protective coverall BERNER Active Breath Z+B+® unites personal protection and breathability in a unique way. In the vulnerable areas (at the front, shoulder and leg region) the protective coverall contains tested and certified personal protective material. The back part of the coverall is made from breathable material and guarantees a controlled air exchange for maximum comfort.

**To order** Protective coverall Active Breath Z+B+®

**Protective coverall Tyvek® Classic Plus**

Type 4/4-B protective coverall against cytostatics, chemicals and biological agents

The type 4 coverall DuPont™ Tyvek® Classic Plus offers good protection when handling cytostatic agents and against many chemicals and biological agents. The well-known Tyvek-material is very robust, extremely comfortable to wear and meets the requirements of EN 1149-1 being anti-statically treated. Suitable for use as a pandemic protective gown (e.g. bird flu, etc.), but not for Ebola or similar viruses.

**To order** protective coverall Tyvek® Classic Plus

**Protective coverall Tyvek® 800J**

New light type 3/3-B coverall

The model Tyvek® 800J made by DuPont™ is the continuous development of the type 3 protective overall market. Just as light as a type-4 coverall, the 800J nevertheless meets the protective requirements of a type-3 coverall. Due to the new material the coverall is more breathable than other type 3-coveralls and offers good protection against inorganic chemicals at low concentrations as well as biological agents. Also suitable for use in pandemics (including Ebola and similar viruses).

**To order** protective coverall Tyvek® 800J

**Protective coverall Tychem® C**

Type 3/3-B: Perfect protection against inorganic chemicals and biological agents

The well-known type-3 protective coverall Tychem® C acts a very effective barrier against many inorganic chemicals. Stitched and overtaped seams, a special chinguard and the robust yellow surface material together with other PPE components (safety goggles, respiratory face mask, etc.) provide the perfect protection for the user. Also for a pandemic task force (e.g. Ebola, ...) the ideal choice.

Protective overboots PB3-3PB

Type PB3 / PB3-B: The perfect addition for any coverall

The protective overboots type PB3 / PB3-B with a slip-resistant and a liquid tight sole offers you maximum protection against aggressive chemicals. The protective overboots have also been tested as infection protection clothing in accordance to EN 14126. The universal shape and elasticated seam at the top as well as the tie strap guarantee a comfortable fit and make them quick and easy to put on and take off.

Protective overboots Active Breath Z+B+®

Cleanroom compliant chemical protection type PB4 for your feet

For optimum protection Berner International offers protective overboots which are a useful addition to the new coverall. The protective overboots Active Breath Z+ B+ are made from the same tested and certified protective material. Elasticated bands and additional ties ensure a good fit around the foot and a particle-tight connection to the overall. A slip-resistant sole makes walking easier and provides a safe grip.

To order Protective overboots Active Breath Z+B+®

Protective overboots Tyvek® Isoclean®

Cleanroom overboots suitable for ISO-class 4 with slip-resistant sole

The overboots Tyvek® Isoclean® made by DuPont combine all the protective properties of Tyvek material with the requirements of controlled areas in cleanrooms. The Tyvek material has been specially cleaned and sterilised and is therefore suitable for cleanrooms up to ISO class 4.

To order Protective overboots Tyvek® Isoclean®

**Protective overboots Z+B+®**

Cleanroom protection for your feet type PB4 / PB4-B

The Berner protective overshoes Z+B+® with a certified slip-retardant sole and liquid-tight coating offers maximum protection. The universal fit and the elasticated ankle guarantee a comfortable fit and are easy to put on and take off.

+ Personal protective equipment (PPE) category III
+ Very high barrier function: comprehensive permeation tests with various cytostatics
+ Low in particles

**Safety boots S5**

Puncture-resistant boots for use during pandemics

These safety boots of the highest safety level S5 with a slip-resistant sole offer maximum protection for pandemics. Due to the high stability and optimal shape the work safety boots are very comfortable to wear. Additionally, the boots are certified as infective protection clothing to EN ISO 20345. The protective boots have reinforced toe caps and a steel layer and are anti-statically treated.

**To order** Safety boots S5 - shaft height 35 cm

Protective oversleeves Z+B+®
Suitable protection for sleeves in cleanrooms against chemicals, cytostatics and biological agents type PB4 / PB4-B.

The low particle oversleeves can be used wherever all over body protection is not required. Due to the liquid-impermeable coating safety protection of the arms is always guaranteed. The cone-shaped cut makes donning easy, universal shape and wearing comfort.

- Comprehensive permeation tests
- Ultrasonic sealed seams for high penetration protection
- Available with knitted or elasticated cuffs

Isolator protective oversleeves Z+B+®
Protection of the isolator oversleeves permeation type PB4

When working with CMR drugs (e.g. cytostatics) all exposed protective materials are subject to potential contamination by a particular substance. The protective oversleeves which are connected to the isolator also lie within the exposed area. However, to maintain a changing rhythm here is very difficult. For this reason Berner International offers a patented oversleeves system, which can be pulled over the existing isolator oversleeve system. The oversleeve system consists of tested and certified PPE and is to be replaced daily. In this way permeation in the fixed part of the isolator oversleeves can be avoided.

Respiratory masks can be divided into particle filtrating half masks (also called FFP masks) and respiratory face masks as partial or full face mask with replaceable filter elements for the filtration of gases and particles. For work areas with insufficient oxygen concentration the use of additional self-contained breathing apparatus is necessary.

It’s all about your safety.
CERTIFIED RESPIRATORY FACE MASKS

Certified, particle-filtrating respiratory face masks in accordance to EN 149 of levels FFP-2 and FFP-3 for use in the laboratory. According to the application area masks can be used for protection against particles and aerosols when handling cytostatics, working with biological agents and viruses or other hazardous substances. All masks are type-tested and certified in accordance to EU directive 89/686/EEC.

Attention - FFP-masks are unsuitable for gases!

For protection against gaseous substances use a reusable partial or full face mask with an appropriate filter.

OVERVIEW OF FFP-FILTRATION RATES*

Example: For a filtration rate of 92 %, 8 % of particles go through the mask (if worn correctly).

* FFP Classification in accordance to EN 149
**FFP-3 Respiratory mask**
Protection against particles, aerosols and viruses

The pre-shaped FFP-3 respiratory mask with integrated valve and fixed mask body made by Uvex Safety. The new, optimised design of this FFP-3 moulded mask in connection with the soft sealing lip makes it very comfortable to wear while optimising the protective function. This respiratory face mask is suitable for handling with CMR drugs (e.g. cytostatics, virostatics, etc.), biological agents and viruses.

**FFP-3 Respiratory mask**
Pre-shaped mask with high wearing comfort

The FFP-3 respiratory mask made by Moldex has an integrated valve and pre-shaped mask body. A sealing lip with elastic straps ensures maximum comfort. Donning and removing of the mask is easy due to the moulded shape and ensures a perfect fit. This face mask is suitable for handling CMR drugs (e.g. cytostatics, virostatics, etc.) biological agents as well as viruses.

**Respiratory full face mask**  
For professional applications for the highest demands

The Dräger X-plore® 6530 full face respiratory mask has been designed for professional applications. In combination with the appropriate X-plore respiratory filter (Rd40 thread to EN 148-1) the mask provides the perfect protection for various applications, e.g. in the chemical or pharmaceutical industry but is also suitable for use in infection protection sets and for use in pathology. Filters exist for virtually all fields of application: We recommend the combi-filter type: 1140 - A2B2E2K2 Hg CO NO-P3 R D. This filter is suitable for many different applications areas and thereby reducing the sources of error as well as storage costs for many filters.

*Not available in all countries.*
Eye protection is of major importance in the laboratory. According to the application area and risk assessment different models of eyewear are suitable. From simple laboratory glasses to safety glasses with frames to gas-tight or autoclavable safety goggles.

Your safety is at stake.

You would like to know more? Simply use your smartphone or tablet to access www.berner-safety.de/glasses
SAFETY GLASSES

Safety glasses are subject to, like the other parts of personal protective equipment (PPE) in Europe, the EU directive 89/686/EEC. Only when the requirements of the directive and the particular relevant standards are fullfilled, a manufacturer is allowed to bring this PPE to the market.

As part of the risk analysis (the key element of health and safety at work) the employer has to assess the hazard potential of individual tasks / activities and provide suitable and tested protective equipment. The employee is then required to wear this equipment for these particular tasks.

The main standard for safety goggles is EN 166 (Personal eye protection- requirements). Depending on the particular field of application which are safety glasses additional EN standards may also be relevant (EN 167 – EN 175, EN 379 and several EN ISO standards on eye optics). Further details and ordering information on the standards can be obtained from your national standards organisation.

AUTOCLAVABLE SAFETY GLASSES FOR THE GMP-COMPLIANT PRODUCTION

Specially for sterile applications autoclavable safety glasses are now available with an anti-fog coating.
Safety glasses Super fit CR
First autoclavable safety glasses with "Antifog"-Effect

Professional work safety in laboratories, clinics, cleanrooms etc. For special demands Uvex has developed the first autoclavable safety goggles with anti-fog coating. The glasses are extremely light, flexible soft side arms fits all face shapes well, is very comfortable to wear with a wide field of vision and can be easily combined with further personal protective equipment (PPE). The glasses can be autoclaved repeatedly at a maximum of 121°C.

Product highlights
+ Large field of vision
+ Autoclavable at 121°C
+ Optimum fit
+ Anti-fog
+ Extremely light

Order No. (non-sterile - 1 pc.) 121406

Gas-tight safety goggles Ultravision
When handling gases and airborne viruses

These full vision safety goggles made by Uvex Safety are fundamentally different from other safety goggles. While standard safety goggles have indirect ventilation, the Ultravision model is gas-tight. These goggles are ideal for working with chemical substances, which turn into the gaseous state at room temperature, but they are also suitable for working with hazardous biological agents. These safety glasses meet the specifications of the German Robert-Koch-Institute (RKI) for infection protection sets (type 1) to safeguard against epidemics such as the Ebola outbreak.

Product highlights
+ Gas-tight
+ Anti-fog coating
+ Good protection and comfortable fit

To order Uvex Ultravision
Size uni
Order No. (1 piece) 121726
Gas-tight safety goggles Fahrenheit SA
For handling gases and airborne viruses

The 3M full vision safety goggles Fahrenheit SA is comfortable to wear and is suitable for wearing over spectacles and in combination with respiratory masks. The acetate lens gives a good field of vision, high chemical resistance and impact resistant up to 120m/s. Naturally the safety goggles are equipped with an “anti-fog”-coating and 100% UV-filtration. The “SA” version of these safety goggles is gas-tight. The application range of these safety glasses extend from working with chemical substances, which change into the gaseous phase at room temperature to working with dangerous biological agents. For example, these safety goggles correspond to the recommendations made by the German Robert-Koch-Institute (RKI) for infection protection sets (type 1) for the protection of current epidemics such as Ebola.

MARKINGS FOR SAFETY GLASSES

1. Protection level (filter only)  
2. Manufacturer’s identification code  
3. Optical class  
4. Symbol for mechanical strength  
5. Mark for non-adherence of molten metal and resistance to penetration of hot solids  
6. Mark for abrasion resistance  
7. Mark for anti-fog resistance  
8. Certification mark  
9. Manufacturer’s identification code  
10. Number of EN standard  
11. Field(s) of use (optional)  
12. Symbol of resistance to high speed particles  
13. Certification mark
In today’s globalised world as a result of the ever increasing mobility, diseases are also transmitted significantly faster from country to country. Infectious diseases, which used to be limited to individual regions or countries, now spread across several continents. The best known examples from the recent past are Ebola, the MERS-CoV coronavirus, bird flu, Mexico flu, but also EHEC, the noro virus and measles.

You would like further details? To access more information using your smartphone or tablet: www.berner-safety.de/pandemic_sets
PROTECTION FOR HEALTH CARE WORKERS IN EPIDEMICS AND PANDEMICS

In general, one talks of an outbreak of a disease, if the number of people affected by a certain infectious disease in a specific region or over a specific time period exceeds the expected number of illnesses.

If the disease continues to spread across national borders and continents it is known as a pandemic, in the field of veterinary medicine it is called of panzootics.

For the protection of health care workers, who enter these hazardous areas, Berner International offers complete pandemic sets of different configurations. Each of these sets comprise a complete set of personal protective equipment (PPE) for one person and are in line with the recommendations of the German Robert-Koch-Institute (RKI).

On request we are also able to put individual sets together to suit any special requirements.
The BERNER pandemic protection set has been developed for health care workers, who remain within the infectious area for a limited period of time (max. 8 hours). The set meets the recommendations of the German Robert-Koch-Institute (RKI) for infectious protection sets, version 1. In line with the guidelines of the RKI, for this type of infection protection set, due to the absence of a gas filtered mask, only a limited decontamination is possible.

The set consists of:

- 1 Type 3 liquid-tight chemical protective coverall: DuPont Tychem® C protective coverall of the highest category III, pressure-tight up to max. 2 bar, additionally tested as protective clothing against infective agents to EN 14126 (type 3-B)
- 1 Pair of protective overboots type 3-B, tested as protective clothing against infective agents to EN 14126 (type 3-B)
- 1 particle filtering uvex - ffP3 respiratory mask as per EN 149, retention capacity at least 99%
- 1 gas-tight uvex - safety goggles
- 1 pair BERNER Nitrile chemical safety gloves with Manu N with additional virus test to ASTM F1671.
- 1 pair BERNER Latex chemical safety gloves Manu L- extra thick material with additional with virus test as per ASTM F1671.
- 1 roll water proof duct tape for sealing the joins
- 1 waste bag
- 1 cable tie
- 1 picture guide how to don PPE in D/GB
- Comprehensive PPE documentation

Order No. (1 set) 4178 4180 4182

Further shoe sizes available on request!
The BERNER pandemic protection set has been developed for health care workers, who remain within the infectious area for a limited period of time (max. 8 hours). The set meets the recommendations of the German Robert-Koch-Institute (RKI) for infectious protection sets, version 2. The full face mask with the corresponding filter makes its particulary easy to breathe, and offers protection against biological pathogens and also absorbs gases which are created during decontamination.

For this type of infection set a standardised decontamination can be carried out in accordance with the RKI guidelines.

The set consists of:
+ 1 Type 3 liquid-tight chemical protective coverall: duPont tychem® C coverall of the highest category III, additionally tested as protective clothing against infective agents to EN 14126 (type 3-B)
+ 1 Pair of s5 work safety boots with a puncture-resistant sole (EN ISO 20345) and steel toe cap
+ 1 respiratory full face mask dräger X-plore with suitable respiratory combination filter
+ 1 gas-tight 3M safety goggles
+ 1 pair BERNER nitrile chemical safety gloves with Manu N with additional virus test to ASTM F1671.
+ 1 pair BERNER latex chemical safety gloves Manu L - extra thick material with additional with virus test as per ASTM F1671.
+ 1 roll water proof duct tape for sealing the joins
+ 1 waste bag
+ 1 cable tie
+ 1 picture guide how to don PPE in D/GB
+ Comprehensive PPE documentation

The BERNER pandemic protection set has been developed for health care workers, who work in areas where a type 4 overall (spray-tight) is sufficient. This set is suitable for the already known variations of the bird flu, livestock diseases without transmission to humans, etc. Naturally the protective equipment has been tested to EN 14126. In line with the guidelines of the RKI, for this type of infection protection set, due to the absence of a gas filtered mask, only a limited decontamination is possible.

The set consists of:
+ 1 Type 4 spray-tight chemical protective coverall: DuPont Tyvek® Classic Plus protective coverall of the highest category III, additionally tested as protective clothing against infective agents to EN 14126 (type 4-B)
+ 1 Pair of protective overboots type PB-3-B
+ 1 particle filtering FFp3 respiratory mask tested to EN 149, retention capacity at least 99%
+ 1 gas-tight 3M safety goggles
+ 1 pair BERNER Nitrile chemical safety gloves with Manu N with additional virus test to ASTM F1671.
+ 1 pair BERNER Latex chemical safety gloves Manu L - extra thick material with additional with virus test as per ASTM F1671.
+ 1 roll water proof duct tape for sealing the joins
+ 1 waste bag
+ 1 cable tie
+ 1 picture guide how to don PPE in D/GB
+ Comprehensive PPE documentation

Auxiliary material for the laboratory makes working easier or safer. Products for this area, which are intended for single use are known as disposables or consumables.
CONSUMABLES FOR THE LABORATORY

In a laboratory various tasks require the use of different tools. For example, prep mats offer good protection against the contamination of surfaces, withdrawal cannula make multiple extraction of liquids from vials much easier and Spillkits contain the complete set of personal protective equipment for the elimination of spills.

EXPERT OPINION
Know-how Spikes
Dr. Jürgen Barth
Pharmacist StL-Studienzentrale
Justus-Liebig-University, D-Gießen

Spikes without particle filter? - An opinion

“...There are further problems with spikes containing filters in the liquid channel. Cytostatics with particulate properties (liposomal formulations, nanoparticles or albumin-bound substances) and suspensions (azacitidine), but also mono-clonal antibodies should not be drawn up using these types of spikes. A suspension remains in the vial. A solution without any active ingredient is drawn up. The same applies to liposomal preparations or the liposomes are destroyed. Also, when drawing up, the (strong) shearing forces may cause the antibodies to be physically altered, damaged or depending on the filter material absorbed.”

The full text of this expert opinion is available on the web site of Berner International under the following address:
www.berner-safety.de/spikes_without_filter
The UltraSpike II was developed for the drip-proof and complete emptying of vials. Due to the special side fixing clips the spike is positioned close to the plug of the vial. This means that the vial can be emptied leaving virtually no residual volume without retracting the withdrawal cannula (which would disable the ventilation).

Like all UltraSpikes the UltraSpike II also has a Halkey-Roberts-valve. The special valve at the Luer-Lock adapter opens automatically and closes again when disconnecting the syringe. It is non-drip, easy to sterilise and offers increased contamination protection. To provide additional safety for the user, the chemo spikes contain a large 0.1 µm PTFE Paclitaxel-resistant ventilation filter.

To order UltraSpike II – with plastic spike, without liquid filter
Order No. (50 pieces) 126217

The UltraSpike II was developed for the drip-proof and complete emptying of vials. Due to the special side fixing clips the spike is positioned close to the plug of the vial. This means that the vial can be emptied leaving virtually no residual volume without retracting the withdrawal cannula (which would disable the ventilation).

To protect the user the ChemoSpike contains a large 0.1 µm PTFE Paclitaxel-resistant ventilation filter.

Model without liquid filter for drawing up viscous substances and monoclonal antibodies.

To order Spike II – with plastic spike, without liquid filter
Order No. (50 pieces) 126216

The MicroSpike Z+ has been specially developed for the work with CMR-drugs such as cytostatics, virostatics and monoclonal antibodies and offers maximum protection whilst being easy to handle.

Due to the extra long cannula vials with a narrow neck can also be drained completely and safely (handling similar to a cannula).

The MicroSpike has a particularly small residual “dead-volume” of only 0.17 ml.

To order MicroSpike Z+® – with extra long cannula, without liquid filter
Order No. (50 pieces) 126215
Withdrawal cannula UltraSpike Z+®

The UltraSpike Z+® are state of the art withdrawal cannula. The special valve at the Luer-Lock-adapter opens and closes automatically and locks automatically when disconnecting the syringe. It is non-drip, easy to disinfect and offers increased contamination protection.

*Extra-Spike® Air SK Chemo

Multiple withdrawal cannula suitable for chemotherapy with a stainless steel cannula, integrated ventilation and hydrophobic, fibre-free 0.2 μm filter.

Compact form with large external ventilation filter.

*Not available in all countries.
SpillKit XP Z+®
Certified emergency and cleaning set for cytostatics

The BERNER SpillKit XP provides all necessary tools for eliminating cytostatic contaminations easily and safely. The SpillKit XP has a type test certificate issued by an external notified body and is recommended by the DGOP and the ESOP.

+ Type-tested and certified
+ Personal protective equipment (PPE) of the highest category III
+ Optimised for all types of cytostatic spills
+ Contains a tested coverall and overboots (please note the size)
+ Also available as latex-free
+ Recommended by DGOP und ESOP

SpillKit Z+®
Standard emergency and cleaning set for cytostatics

Unser bewährtes BERNER SpillKit Z+® enthält Zytostatika-Schutzkleidung, Hilfsmittel, ein Formular zur Unfallanzeige und vieles mehr – damit Sie bei Unfallsituationen mit CMR-Arzneimitteln (z.B. Zytostatika) gut gerüstet sind.

+ Geprüfte und zertifizierte PSA der höchsten Kategorie III
+ Variante mit Schutzkittel, Größe: uni
+ Enthält alle notwendigen Hilfsmittel z.B. ChemoSorb-Pad, Reinigungstücher, ...
+ Umfängreiche Dokumentation

Cytotoxic wipe sampling set
Easy and quick

When handling CMR drugs (e.g. cytostatics), unintentional cross-contamination from contaminated gloves, vials, protective clothing, shoes or wheels from transport trolleys, etc. can easily occur. Accidents or disturbances in airflow of safety cabinets can also lead to the release of cytostatic drugs. In the German MEWIP study (Monitoring-Effect Study for Wipe Sampling in Pharmacies) cytostatic drugs were found in 61% of all samples.

In cooperation with the Institute of Energy and Environmental Technology (IUTA e. V.) in Germany, Berner International has developed a wipe sample set, with which contaminations from CMR drugs can be detected quickly and safely. Through regular monitoring weaknesses in the production, handling and cleaning processes are easily detected and corrected.

- Validation of cleaning processes
- Detecting sources of contamination
- Control and optimisation of work processes
- Proof of the optimum work procedure for your customers
- Cost-effective analysis tool
- Suitable for use by own staff
- Analysis of 27 single substances or as a group using different multi-methods
- Fast and detailed report
- Can be performed at any time
- Improved protection for your employees

Detectable Substances
- 5-Fluorouracil
- 6-Mercaptopurine
- Acemetacine
- Azathioprine
- Busulfane
- Capecitabine
- Carboplatin
- Carmustine
- Chlorambucil
- Cisplatin
- Clomiphene
- Cyclophosphamide
- Cytarabine
- Doxorubicin
- Docetaxel
- Etoposide
- Flutamide
- Gemcitabine
- Gesamt-Platin
- Ifosfamide
- Methotrexate
- Mitomycin
- Oxaliplatin
- Paclitaxel
- Sulfamethoxazol
- Tamoxifen
- Thalidomide

The cost-effective multi-method (as in MEWIP) for the simultaneous analysis of various substances.

**Multi-method 1**
- 5-Fluorouracil
- Cyclophosphamide
- Ifosfamide
- Gemcitabine
- Etoposide
- Methotrexate
- Paclitaxel
- Docetaxel
- total-platinum.

**Multi-method 2**
- 5-Fluorouracil
- Cyclophosphamide
- Ifosfamide
- Gemcitabine
- Etoposide
- Methotrexate
- Paclitaxel
- Docetaxel
- total-platinum.

**Multi-method 3**
- 5-Fluorouracil
- Cyclophosphamide
- Ifosfamide
- Gemcitabine
- Etoposide
- Methotrexate
- Paclitaxel
- Docetaxel
- Cisplatin
- Carboplatin
- Oxaliplatin
- total-platinum.

**Platinum analysis**
- Cisplatin
- Carboplatin
- Oxaliplatin
- total-platinum.
Prep mats for cytostatics and biological agents

Avoiding surface contamination

Extremely absorbent prep mats with with an impermeable lower layer for use in the laboratory. Minimizes time spent on cleaning.

+ Safe absorption of liquids
+ Available sterile and non-sterile

ChemoSorb-pad

For the absorption of large amount of liquids in hospitals, pharmacies and laboratories

The ChemoSorb-pad reliably absorbs and binds many chemicals. The liquids (e.g. cytostatics) are turned into a gel-like mass (similar to a babies’ nappy) and thereby guarantees safe and effective elimination.

+ Binds liquids without drips
+ Liquid absorption up to 3 l
+ Suitable for CMR-drugs (e.g. cytostatics)
+ High absorption and easy handling
+ Ideal for emergencies (spill emergencies)

Cleanroom cloths ISYSOFT, ISYSOFT II and Cleanroom 100

Highest cleaning efficiency and optimal surface cleaning

ISYSOFT, Isysoft II (latex-free) and Cleanroom 100 cleaning wipes are optimised for cleaning in the cytotoxic field and for working with biological agents. The material is due its special structure extremely tear-resistant and absorbent.

To order Cleaning cloths

**Tubular foil for the SealSafe®**
Liquid and aerosol-tight sealing of waste

Tubular foil for the waste disposal unit BERNER SealSafe®, BERNER SealSafe Sensor® and the older version BERNER PactoSafe®. Developed for the easy disposal of waste when dealing with waste of SMR drugs and biological agents. Comprehensive permeation tests prove the cytostatic barrier function. Sealed waste can remain in the waste disposal container up to a week. The yellow coloured version of the tubular film is recommended for handling biological agents.

**To order Tubular foil SealSafe®**

| Order No. (sterile, colourless, for cytotoxics, 3x tubular foil) | 1001 |
| Order No. (non-sterile, colourless, for cytotoxics, 5x tubular foil) | 1000 |
| Order No. (non-sterile, yellow, for microbiological applications, 5x tubular foil) | 1002 |

**Tubular film for the PolyStar®**

Tubular film for the drug sealing device PolyStar®

The colourless, highly transparent polyethylene film (special mixture) is extremely tear resistant and waterproof. Roll with a plastic core.

**To order PE-tubular film**

| Order No. (ca. 200 x 0.05 mm, 200 m) | 048003 |

| Order No. (ca. 200 x 0.20 mm, 100 m) | 048007 |

**UV light protection bag**

For the safe storage and transport of light sensitive substances - with UV protection

The opaque brown coloured UV light protection bags protects for example, cytostatics reliably against UV radiation and guarantees storage and transport. The resealable zip lock bags facilitate the handling. The material thickness is 50 µm.

**To order UV bags**
