

NOTIFICATION OF CHANGE

Replacement of Dermagrip Ultra LT (200 pieces) with new nitrile protective glove manual® SLN 319

Dear customers,

As your partner for personal protective equipment (PPE) and disposables, we would like to keep you always informed comprehensively of changes and improvements to the products you purchase. Therefore, we inform you that the manufacturer of Dermagrip Ultra LT protective glove will cease production of the 200 packaging units. As an alternative article we can now offer you the **manual® SLN 319** nitrile protective glove.

The **manual® SLN 319** is a short nitrile chemical protective glove for handling chemicals and biological agents. It can be used equally well in all areas of application and, like its predecessor, has the so-called SafeDon™ dispensing system. This special dispenser system prevents up to 96% of cross-contamination when donning gloves. As a further innovation, the **manual® SLN 319** is certified according to the new PPE regulation (EU) 2016/425.

The remaining packaging units of the affected article should be used up from our stock within the next weeks. Please note! The 8x50 packaging units of Dermagrip Ultra LT will be retained and are still available.

Changes

- + Introduction of nitrile protective glove **manual® SLN 319** with SafeDon™ dispenser system (200 pcs)
- + Changeover of Dermagrip Ultra LT - 200 pieces packing unit
- + Retaining of Dermagrip Ultra LT - 8x50 pieces packaging unit
